

SabiCard Seller Guide

MVP onboarding, seller activation, card registration, NFC encoding, credits, and seller policies.

Generated from actual SabiCard application screenshots.

1. Seller Account Registration

A seller starts by creating a normal SabiCard account. For the MVP, seller access is not automatic. The platform admin reviews and activates the seller account.

1. Open the registration page.
2. Enter full name, email, password, and confirmation password.
3. After registration, sign in with the new account.

The screenshot shows the SabiCard registration interface. At the top, the SabiCard logo is displayed. Below it, the heading 'Create your account' is centered, followed by the subtext 'Get started with SabiCard'. The registration form is a white card with a light blue border. It features a 'Sign up with Google' button at the top. Below this, a horizontal line with 'OR' in the center separates it from the manual registration fields. The fields include: 'Full Name' with the example 'Juan Dela Cruz', 'Email' with the example 'you@example.com', 'Password' and 'Confirm Password' fields, both with masked characters and toggle icons for visibility. A blue 'Create Account' button is positioned below the password fields. At the bottom of the card, a link reads 'Already have an account? Sign in'.

2. Sign In

The seller signs in using the same account that will later be approved by the admin.

3. Seller Access

In this MVP, seller access is approved by the platform before the Seller Dashboard becomes available. Once approved, the seller signs in with their normal SabiCard account and opens the Seller Dashboard.

1. Create or sign in to the seller account.
2. Wait for platform approval.
3. Open `/seller` to manage credits and cards.

4. Seller Dashboard

After activation, the seller can open the Seller Dashboard. This dashboard shows credits, total cards, unactivated cards, and activated cards.

The screenshot displays the SabiCard Seller Dashboard. On the left is a sidebar with navigation links: GENERAL (Dashboard, My Card, Leads, Analytics), SELLER (Seller Dashboard), and ACCOUNT (Settings, Help). A 'Sign Out' button is at the bottom. The main area is titled 'Seller Dashboard' with a subtitle 'Register NFC cards, spend credits, and monitor customer activations.' and a 'Refresh' button. It features four summary cards: Credits (97), Total Cards (1), Unactivated (0), and Activated (1). Below these is the 'Register Card' section with a 'Generate UID' button, input fields for 'Card UID' (SC233188) and 'Card Type' (Standard), and a '+ Register and Use 1 Credit' button. The 'Seller Cards' section includes a search bar, a status filter set to 'All Statuses', and a list of cards. One card is shown: SC933528 (active), with a Tap URL, customer name (Julian Vance), and creation time (6/9/2026, 9:52:05 AM). Action buttons for 'Copy URL' and 'Encode NFC' are provided for this card.

5. Registering a Card

To issue a card, the seller enters or generates a Card UID and clicks **Register and Use 1 Credit**.

One successful card registration consumes exactly 1 seller credit. Failed NFC writing does not consume another credit because the credit is deducted when the card record is registered in the platform.

6. Encoding the NFC Card

After registration, the seller can encode the card by writing the card tap URL to the physical NFC tag.

1. Find the card in Seller Cards.
2. Click **Encode NFC**.
3. Use Chrome on Android over HTTPS with NFC enabled.
4. Hold the card still near the phone until writing finishes.

If Web NFC is not supported on the device, copy the Tap URL and use another NFC writer app or compatible Android browser/device.

The screenshot displays the SabiCard Seller Dashboard. On the left is a sidebar menu with sections: GENERAL (Dashboard, My Card, Leads, Analytics), SELLER (Seller Dashboard), ACCOUNT (Settings, Help), and a Sign Out button. The main content area is titled 'Seller Dashboard' with a subtitle 'Register NFC cards, spend credits, and monitor customer activations.' and a Refresh button. Below this are four summary cards: Credits (97), Total Cards (1), Unactivated (0), and Activated (1). The 'Register Card' section includes a form for Card UID (SC233188) and Card Type (Standard), with a Generate UID button and a Register and Use 1 Credit button. The 'Seller Cards' section features a search bar, a status filter (All Statuses), and a list of cards. One card is shown with ID SC933528, status 'active', Tap URL 'https://www.sabicard.app/tap?uid=SC933528', Customer 'Julian Vance', and creation time '6/9/2026, 9:52:05 AM'. Action buttons for 'Copy URL' and 'Encode NFC' are present for this card.

7. Customer Activation

The seller gives the encoded card to the customer. When the customer taps the card, SabiCard opens the activation page. The customer creates or signs in to their own account, then confirms activation.

The system automatically links the activated card and customer back to the seller who registered the card.

Activate Your NFC Card

Welcome! Let's get your digital business card set up.

Card UID

SC-DEMO-GUIDE

Card not found.

What you'll get:

- ✔ **Digital Business Card** - Share your contact instantly
- ✔ **Lead Capture** - Collect contact details from viewers
- ✔ **Analytics** - Track taps and profile visits

Credit Rules

Credit Usage

- 1 registered card = 1 credit consumed.
- Credits are deducted only after successful card registration.
- Duplicate card UIDs should not be registered again.
- Credits are tracked in a ledger for audit history.

Seller Access

- Seller accounts are admin-approved during the MVP.
- Suspended sellers cannot register new cards.
- Seller dashboard data is limited to cards registered by that seller.
- Users activate their own accounts; sellers do not create customer accounts.

Replacement and Support Policy

- Each new physical card registration uses a credit.
- Lost, defective, or replacement cards should be handled according to admin policy.
- Admin may adjust credits manually for approved support cases.
- Card ownership should not be transferred after activation without admin review.
